

Multi Response Forms: Exxat Form Builder

How to set up a form that accepts multiple responses, using the example form Student Volunteer Record.

Subject

Exxat form builder

Scope

Multi response forms

Companion to

Form Creation Guide (Step 14)

Last updated

1 October 2026

Before you start

This guide assumes a new form has already been created in the Form Builder (Steps 2 and 6 of the Form Creation Guide). Custom is the Feature Type generally used; MultipleResponse is chosen instead only when multiple responses will be submitted for the form.

Setting up a multi response form

A multi response form is used when multiple responses will be submitted for the form. It is set up by choosing **MultipleResponse** as the Feature Type and ticking **isMultiResponse**. This part uses the example form *Student Volunteer Record*, with the Feature ID `MS0T_SVR_PLNU`, whose first field is Date of Initiation.

Steps at a glance

- 1 In App Definition, select **Feature Type**, then **MultipleResponse**.
- 2 Tick the **isMultiResponse** checkbox.
- 3 Create a field at the top. In Description enter **Date of Initiation**, select the control type **datepicker**, and in Validations add **required** with the message **Please select the date**.

- 4 Go to the Advanced sub-tab and enter the Property Name **initiatedOn**.
- 5 Click **Save**.
- 6 Save and publish the form in the particular tenant.
- 7 Check the preview.

1. Select MultipleResponse as the Feature Type

On the **Form** tab, open the **Feature Type** dropdown in the App Definition group. It offers Custom, MultipleResponse and Standard. Select **MultipleResponse**.

The screenshot displays the 'Form' tab of a configuration interface. At the top, there are tabs for 'FORM', 'SECTIONS', 'LAYOUT', 'WORKFLOW', 'NOTIFICATION', and 'TERMS'. The 'FORM' tab is active. Below the tabs, there are input fields for 'Form Name *' (containing 'Student Volunteer Record') and 'Form Name Abbreviation' (containing 'MSOT_SVR_PLNU'). Under the 'REPORTS' section, there are dropdowns for 'Report Type' (set to 'Custom'), 'Report Action Id', and 'Instance Id'. There is an unchecked checkbox for 'Aggregation'. The 'SCORING' section has an unchecked checkbox for 'Enable scoring'. The 'APP DEFINITION' section contains a 'Feature Type' dropdown menu, which is open, showing three options: 'Custom', 'MultipleResponse' (highlighted in pink), and 'Standard'. To the right of the dropdown are input fields for 'Label' (containing 'Student Volunteer Record'), 'Short label' (containing 'Student Volunteer Record'), and 'Name' (containing 'Student'). Below these are more input fields: 'Actor Details', 'Workflow Details', 'Multi Response Type', 'Reference Key', and 'Template'. There are several checkboxes: 'Initiated By' (dropdown), 'autoReminder', 'autoSave', 'isMultiResponse' (checked), 'isAdminTreeViewEnable', 'isAnonymous', 'isFormLinkingEnable', 'isTrackerEnabled', and 'isReportAverageScoreEnabled'. At the bottom, there are tabs for 'HELP' and 'RULES', with 'HELP' being active. Below the 'HELP' tab, it says 'No help Added'.

Figure 1. Selecting MultipleResponse in the Feature Type dropdown.

In the example, the form name is Student Volunteer Record and the Form Name Abbreviation (Feature ID) is MSOT_SVR_PLNU. Label, Short label and Name show the form name.

2. Tick isMultiResponse

In the option checkboxes of App Definition, tick **isMultiResponse**. It is unticked by default.

Instance Id	Report Action Id Value	☒ Include all fields in reports
Short label	Name	Detail
Student Volunteer Record	Student Volunteer Record	Student Volunteer Record
Workflow Details	Auto Notification Details	Icon
Reference Key	Template Type	Report Type
AutoSave	☒ isMultiResponse	☒ isActive
isFormLinkingEnable	☒ isPDFDownloadEnable	☐ isPostTestEnableForStudent
☐ isReportAverageScoreEnabled		

Figure 2. isMultiResponse ticked. isActive and isPDFDownloadEnable are also ticked.

3. Create the first field: Date of Initiation

Create a field at the top of the form (adding sections and fields is described in Step 7 of the Form Creation Guide). On the **Main** sub-tab:

- **Description:** Date of Initiation
- **Control type:** datepicker

Figure 3. Description Date of Initiation, and the control type datepicker selected from the list.

The Control type dropdown in this screenshot lists these options, and the list continues below them:

Control types visible in the list

label, textbox, textarea, checkbox, radio, select, auto-fill, datepicker, timepicker, file-upload, esign, slider, formula, selection-list

Validation

Click **Add Validation**. Set **Name** to **required**, and choose the message **Please select the date**. The date message suits a date question.

The screenshot shows a form configuration interface with two tabs: **MAIN** and **ADVANCED**. The **MAIN** tab is active. Under the **Content** section, the **Description** is "Date of Initiation". The **Control Type** is set to "datepicker". In the **Validations** section, a validation rule is added with the name "required". A dropdown menu is open, showing a list of messages. The message "Please select the date." is highlighted in pink. Other messages in the list include "This field is required.", "Please select the appropriate option.", "Please select the appropriate options.", "This field requires a signature. Please sign here.", and "Please select the appropriate rating.".

Figure 4. The required validation with the message Please select the date.

4. Enter the Property Name

Go to the **Advanced** sub-tab of the field and enter the Property Name **initiatedOn**. As with every question, the Property Name must be unique (Step 7 of the Form Creation Guide).

5. Save, publish and check the preview

- 1 Click **Save**.
- 2 Save and publish the form in the particular tenant.
- 3 Check the preview.

The preview shows how the Date of Initiation field is created.

Important Note: This is a SAMPLE of the evaluation form. It is not intended for entering and saving information. Any information entered here will not be saved.

Student Volunteer Record

Who will be filling-up the form?: Student

Workflow Details: Student fills and submits the form, faculty reviews the form.

Notification Details: No notifications are activated.

Student Volunteer Record

Date of Initiation*

MM/DD/YYYY

Use this form to keep a running record of your volunteer hours across the whole MSOT program. Read the directions below, then log each experience on page 2.

Purposes

- To demonstrate the mission of PLNU by serving others as an expression of our faith.
- To gain valuable leadership skills to prepare you for becoming a leader in the occupational therapy profession.
- To gain experience in communicating and working with people and populations typically seen by occupational therapists.

Requirements

4 hours

20 hours

Figure 5. The preview of the form. The required Date of Initiation field is shown near the top.

What the preview shows	In the example
Banner	A note that this is a sample of the evaluation form, not intended for entering and saving information. Anything entered will not be saved.
Who will be filling-up the form?	Student
Workflow Details	Student fills and submits the form, faculty reviews the form.
Notification Details	No notifications are activated.
Date of Initiation	Shown with a red asterisk, because it is required, and a date field with the placeholder MM/DD/YYYY.

Note

The screens for publishing the form in the tenant are not covered yet. The other content below the date field in the preview, such as the directions, purposes and requirements, is not covered in this part.

Glossary

Feature Type

A dropdown in the App Definition group with the options Custom, MultipleResponse and Standard. Custom is the type generally created; MultipleResponse is chosen when multiple responses are submitted for the form.

MultipleResponse (Feature Type)

The Feature Type chosen when multiple responses will be submitted for the form.

isMultiResponse

An option in App Definition that is ticked for a multi response form. It is unticked by default.

Form name abbr (Feature ID)

A unique abbreviation that keeps each form separate from the others. It is built from the initials of the form name, the university OU code and the domain. Only capital letters, small letters, numbers and underscores are permitted, with no spaces.

Label, Short label, Name, Detail

Fields in the App Definition group that are filled automatically with the name of the form when a new form is created.

Section

A group created by typing a name in Caption and clicking Add Section. Fields (questions) are added to a section.

Add Field

The button on a section that opens the field box, which has Main and Advanced sub-tabs.

Description

In the field box, the question that needs to be added.

Control type

A dropdown that sets the kind of field used for the question. Control types are covered separately.

datepicker

A control type used for a date question, such as Date of Initiation.

Validation (required)

A rule added with Add Validation. Choosing required makes the question mandatory, and a Message is then chosen to suit the question.

Property Name

A required entry on the Advanced sub-tab that identifies a question. It must be unique for each and every question.

fieldId

An identifier shown on the Advanced sub-tab. In the example it is the Feature ID of the form followed by the Property Name.
